

Integrated Logistics, Freight & Warehouse Management Platform

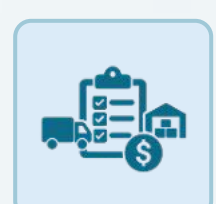

Every job, trip and charge tied back to one work order.

A document fee, a toll receipt, or extra port waiting time—each is a real cost that can easily get lost between the yard and the invoice.

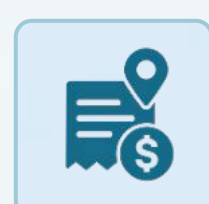

One work order connects the entire job—from documentation and trips to fleet, driver activity and costs. Everything stays synced in real time, with itemised charges ready when it's time to invoice.

Three Pillars

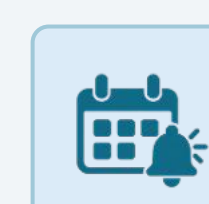

One Work Order, Whole Job

Documentation, transport, warehousing, fleet and billing all reference the same master work order from open to close.

Costs Captured Where They Happen

Trip expenses, document fees and petty cash are logged in the field and carried straight into the draft invoice.

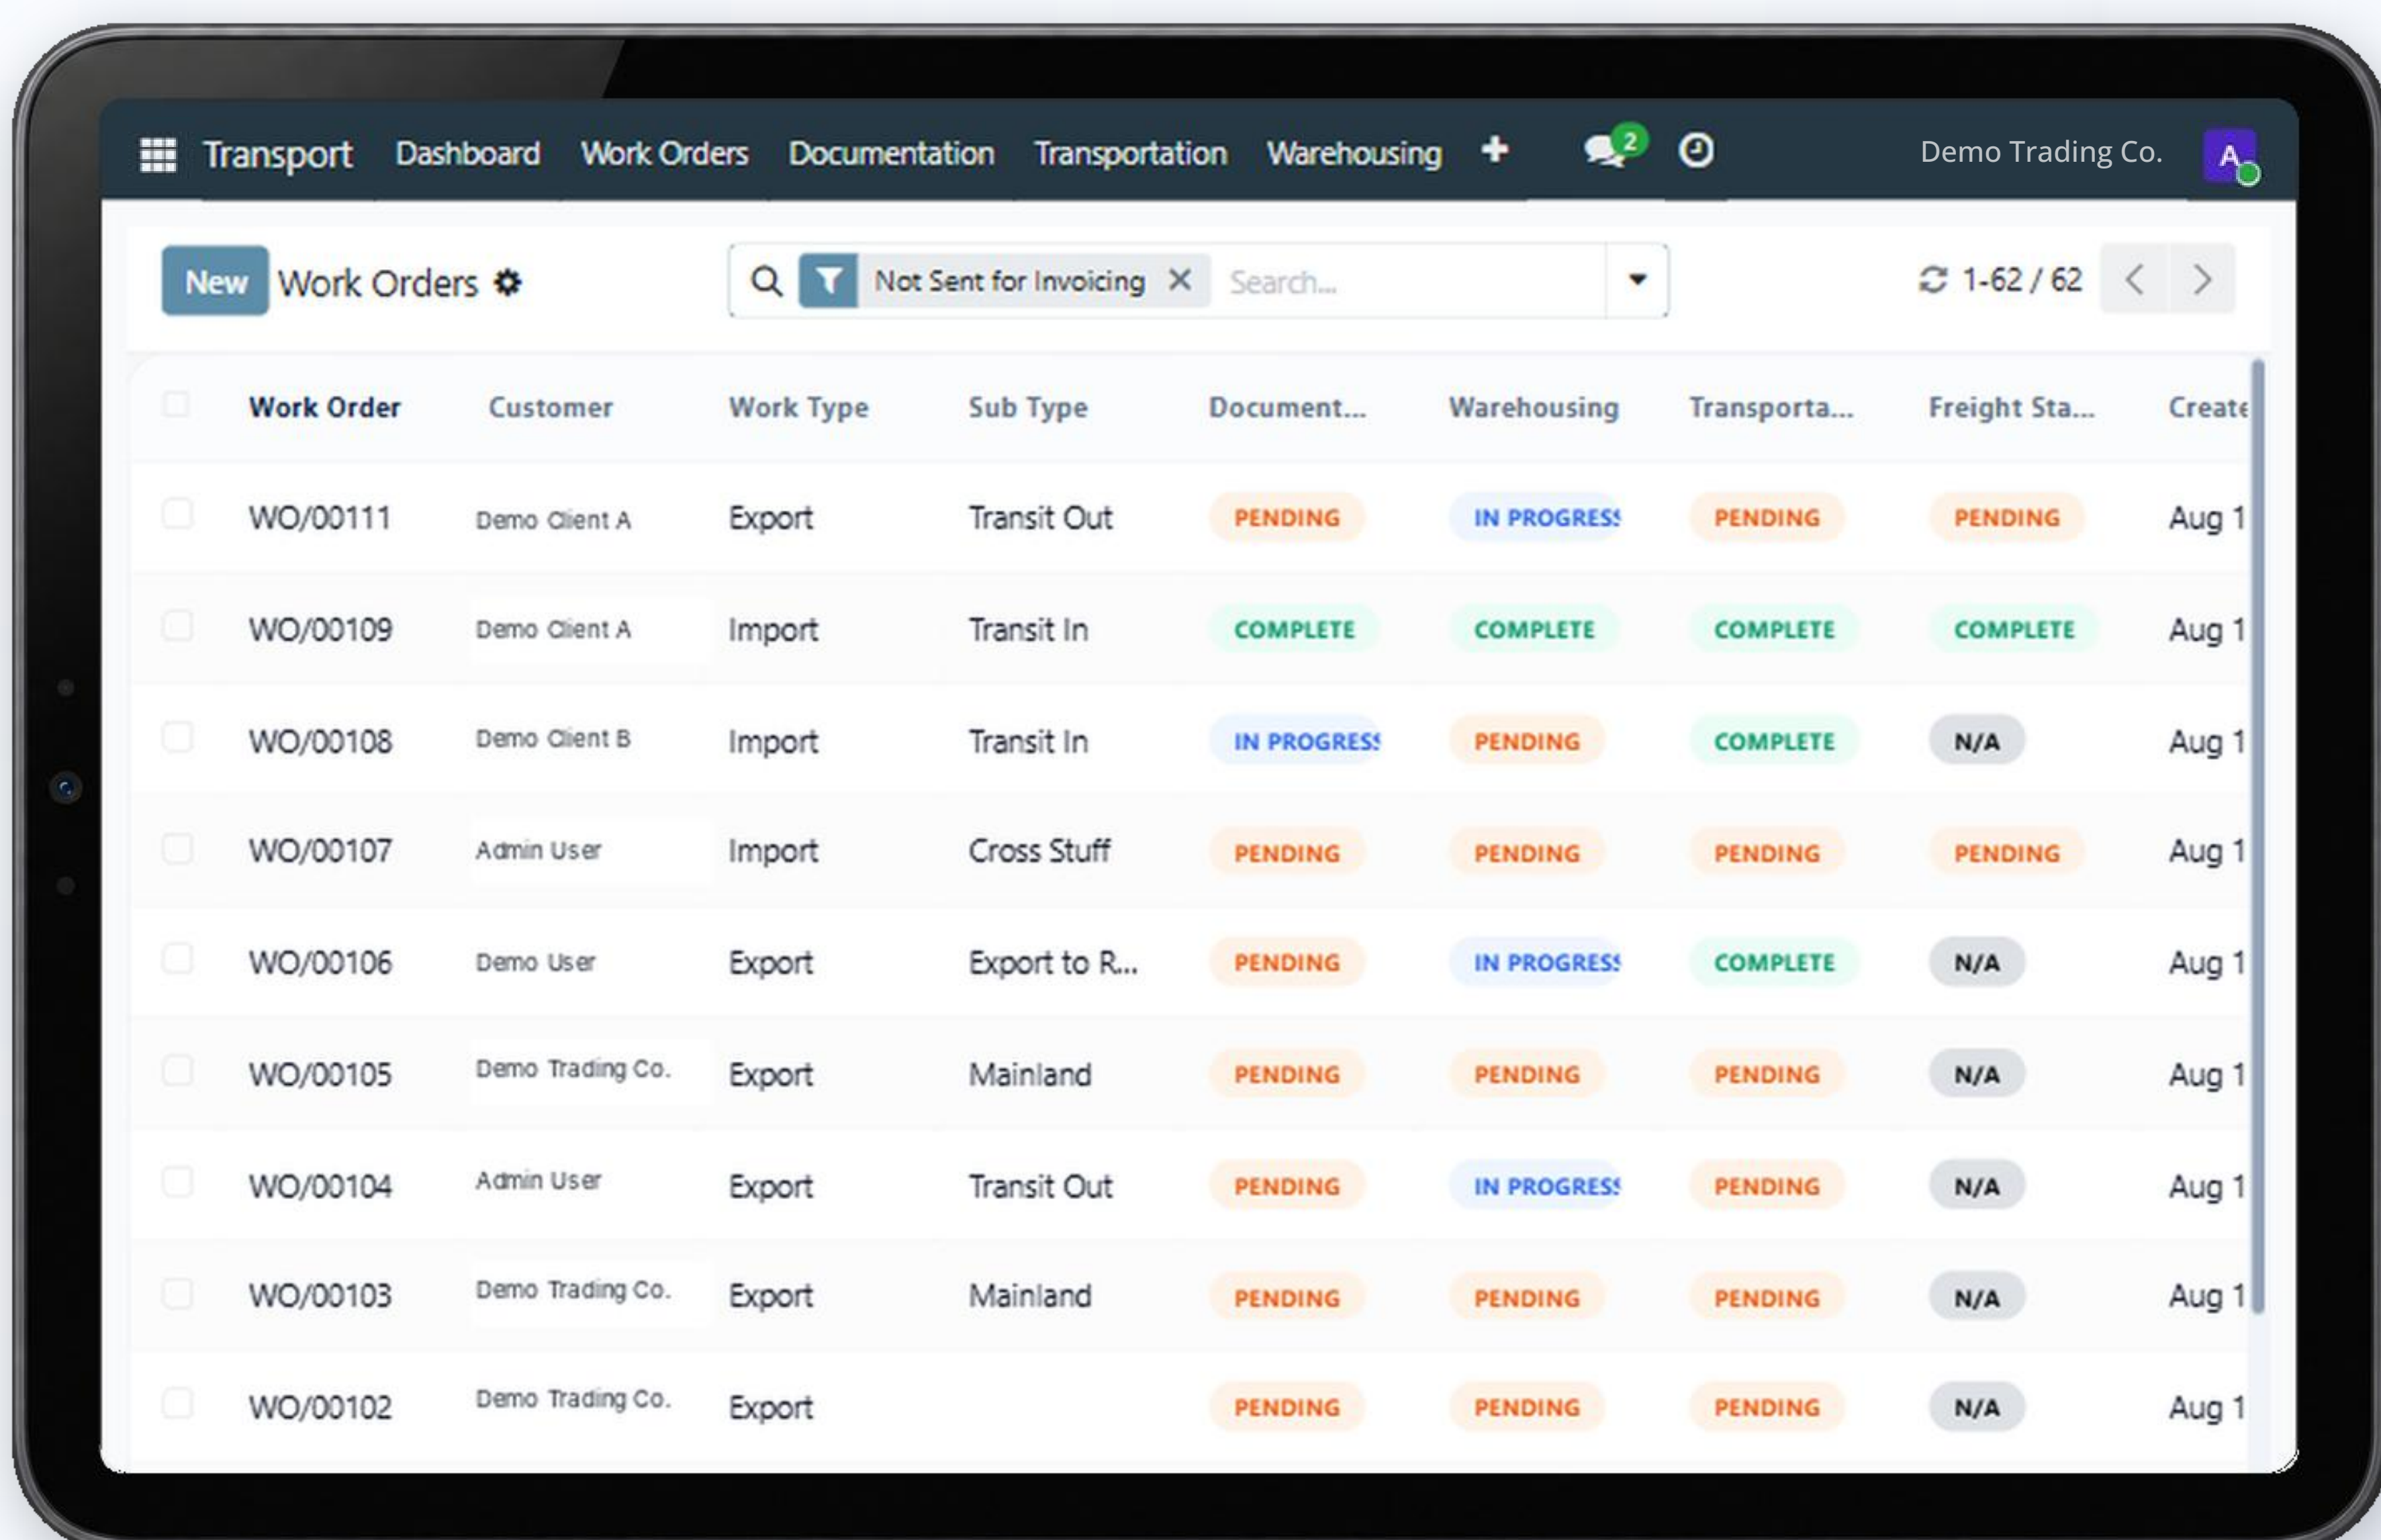

Expires Flagged Before They Bite

Vehicle registrations, transport permits, driver visas and product shelf life all carry renewal alerts ahead of the date.

Key Feature Modules

Work Order Management : The work order is where the job starts and where everything that happens to it comes back to.

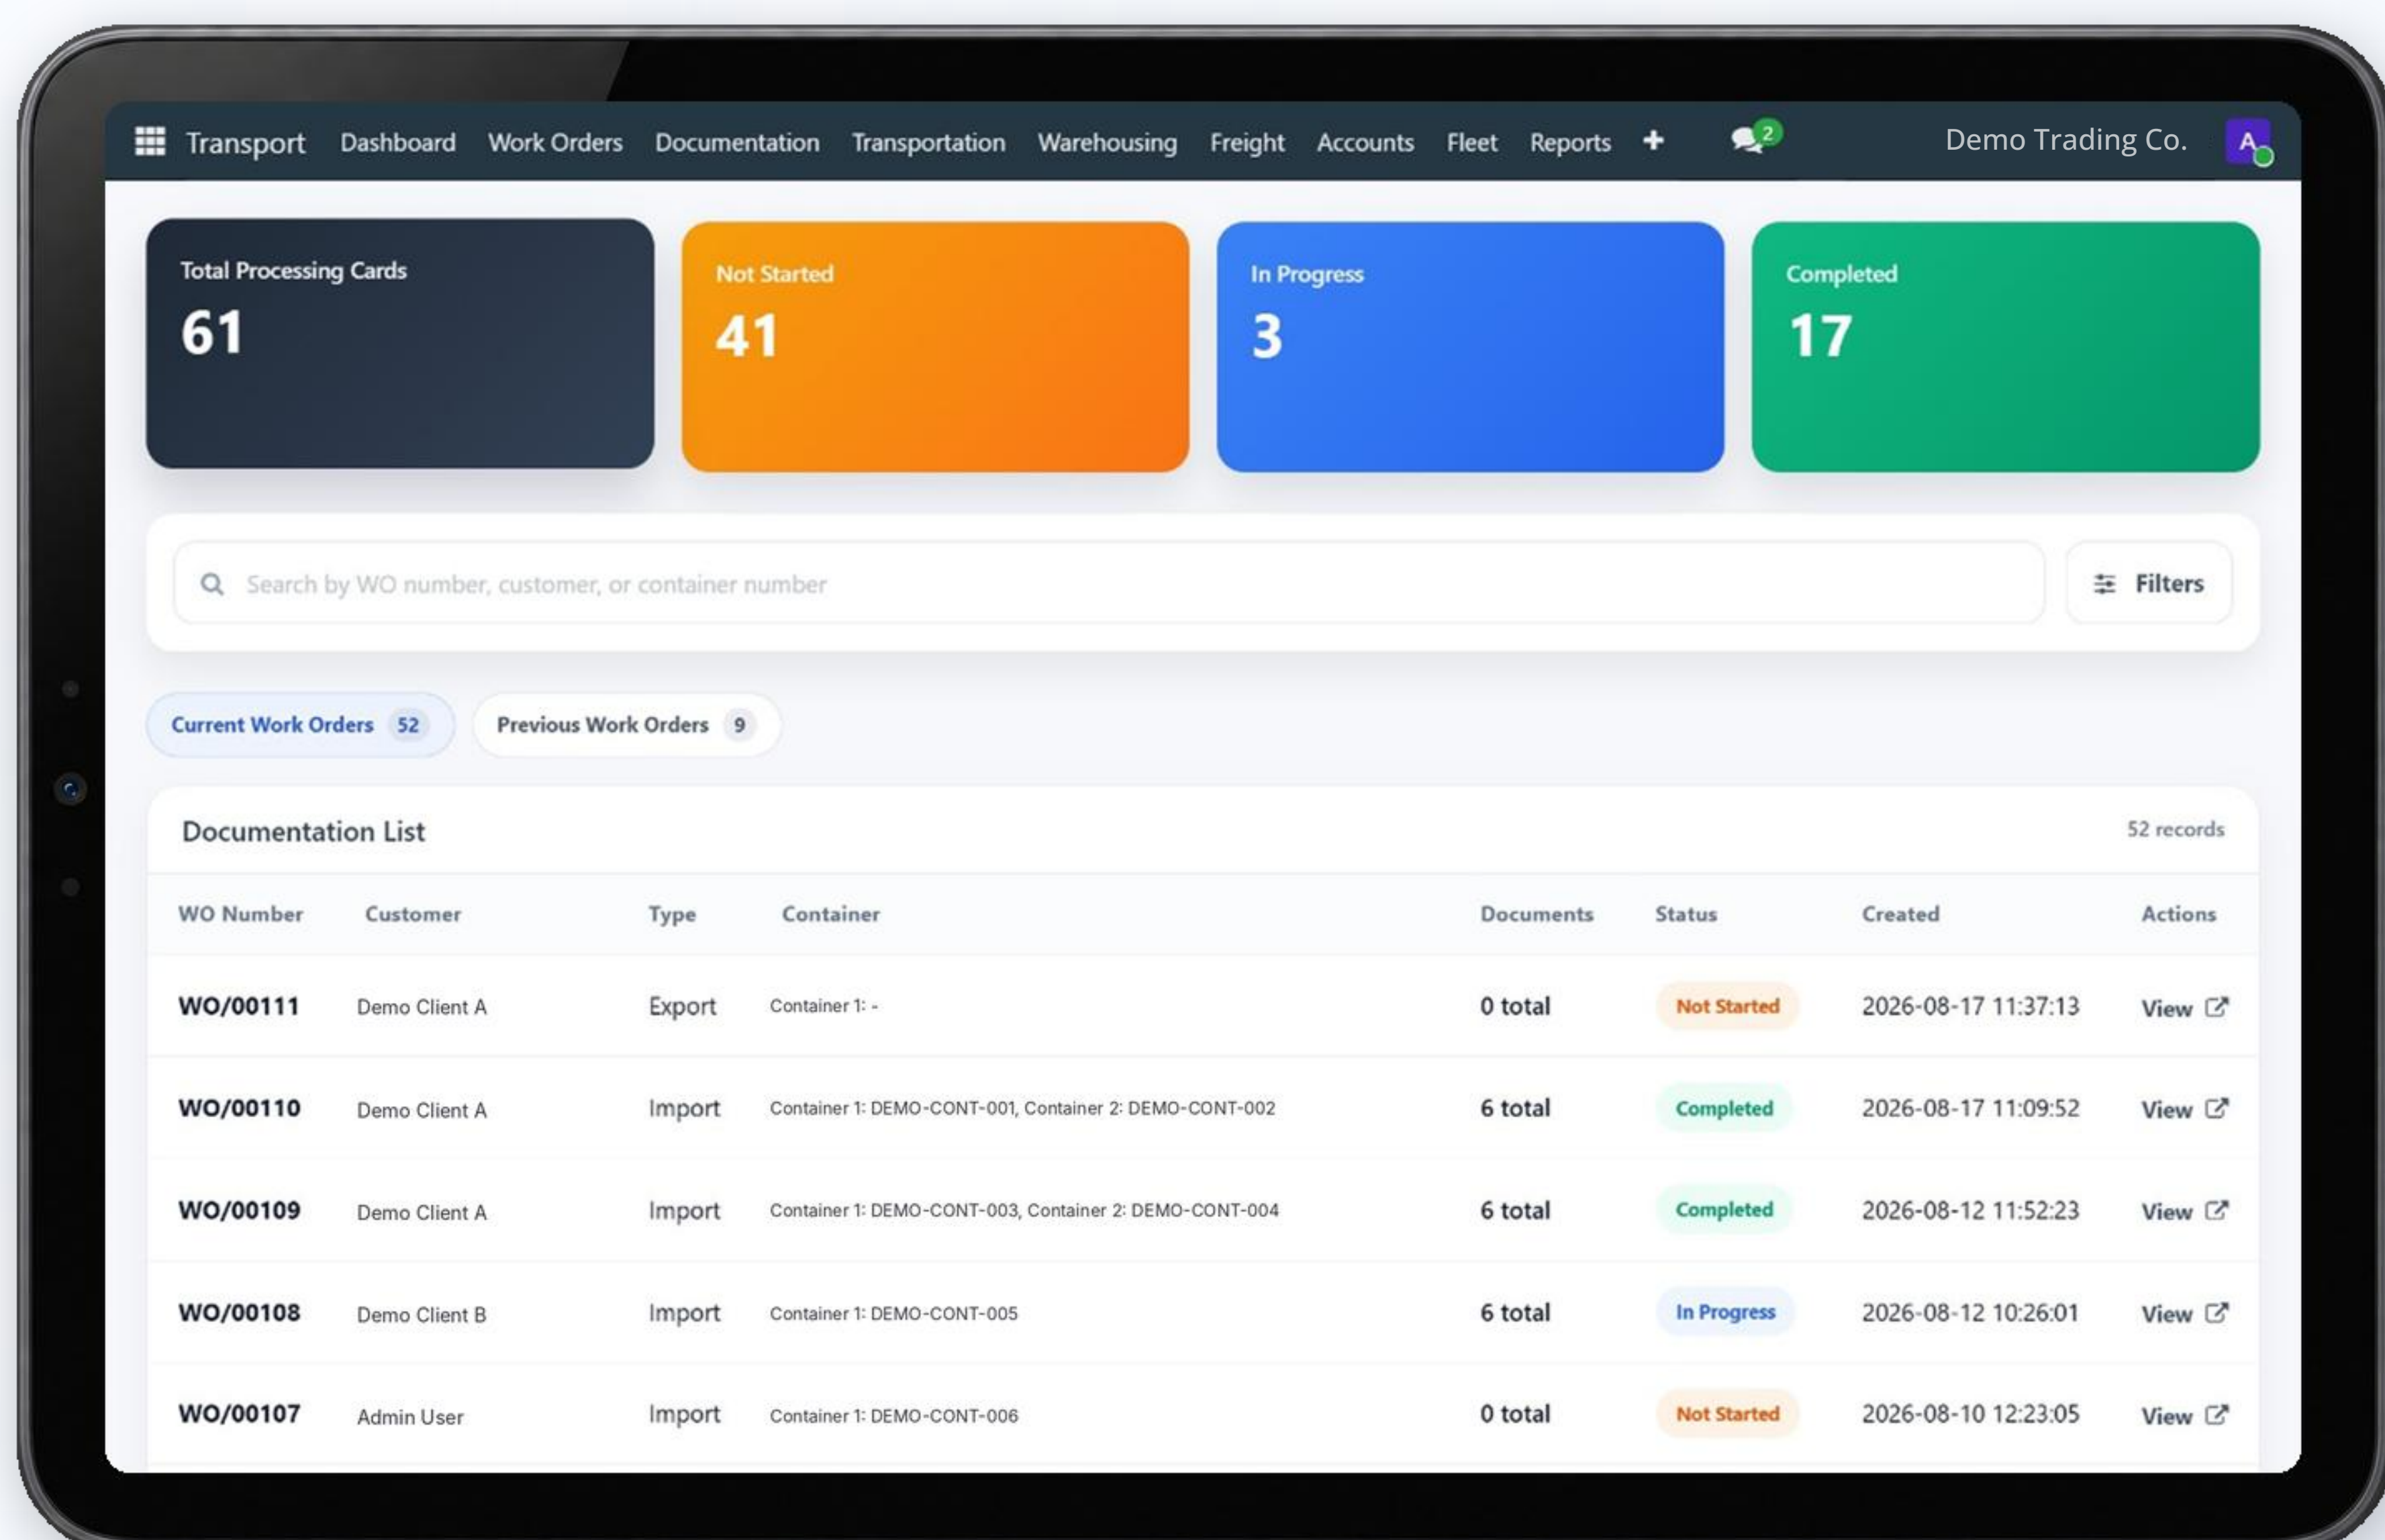

Work Order	Customer	Work Type	Sub Type	Document...	Warehousing	Transporta...	Freight Sta...	Create
WO/00111	Demo Client A	Export	Transit Out	PENDING	IN PROGRESS	PENDING	PENDING	Aug 1
WO/00109	Demo Client A	Import	Transit In	COMPLETE	COMPLETE	COMPLETE	COMPLETE	Aug 1

WO/00106	Demo User	Export	Export to R...	PENDING	IN PROGRESS	COMPLETE	N/A	Aug 1
WO/00105	Demo Trading Co.	Export	Mainland	PENDING	PENDING	PENDING	N/A	Aug 1
WO/00104	Admin User	Export	Transit Out	PENDING	IN PROGRESS	PENDING	N/A	Aug 1
WO/00103	Demo Trading Co.	Export	Mainland	PENDING	PENDING	PENDING	N/A	Aug 1
WO/00102	Demo Trading Co.	Export		PENDING	PENDING	PENDING	N/A	Aug 1

- **Every Trade Type:** Import, export, transit in, transit out and cross stuff operations each open as a work order, so the same structure holds whichever way the cargo is moving.
- **One Reference, Whole Lifecycle:** Documentation, transportation, warehousing, fleet allocation, driver logs and billing link back to the master work order reference, which means the history of a job reads in one place instead of four systems.
- **Live Job Status:** Operations teams see which jobs are open, which are moving and which are waiting, without calling round the yard to find out.
- **Nothing Orphaned:** Because charges and documents attach to a work order rather than floating on their own, a cost raised in week one is still attached to the job when it is invoiced in week five.

I Key Feature Modules

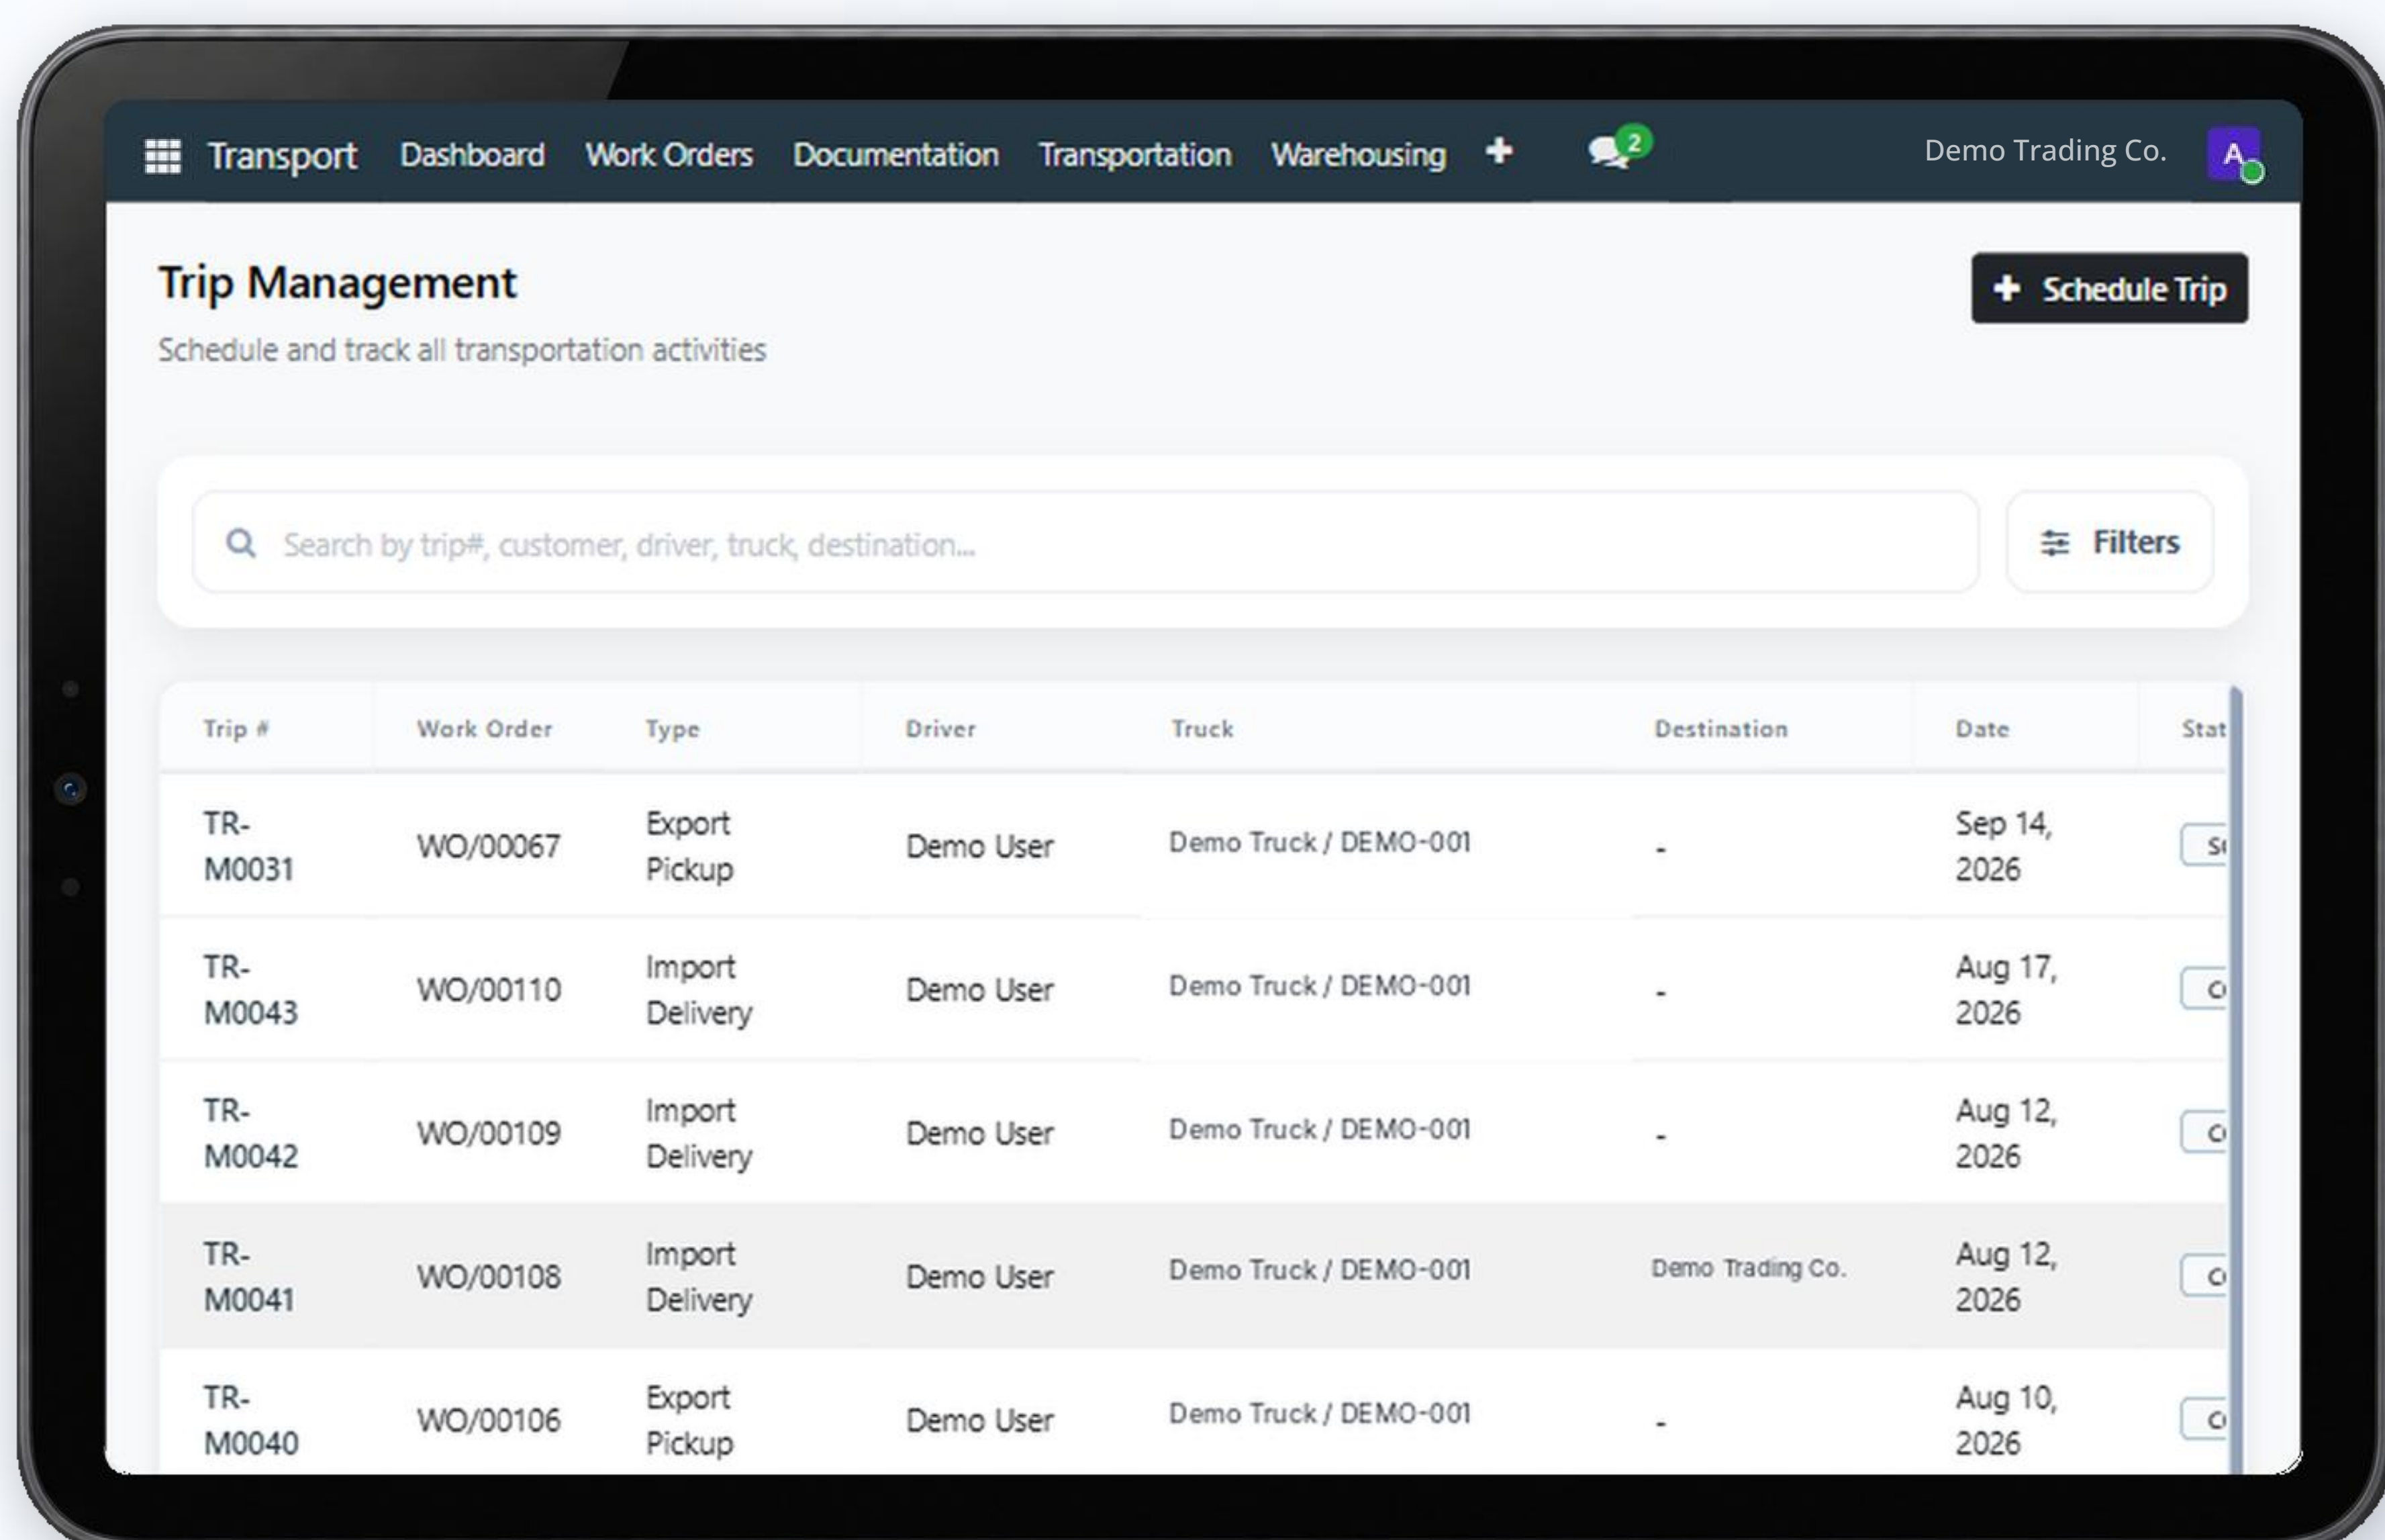

Documentation : Standard shipping paperwork and the one-off documents that never fit a template, held in the same vault.

- **Standard & Custom :** Regular shipping documents sit alongside custom logging for whatever the job throws up, captured by document type, document number and digital attachment.
- **Expiry Tracking :** Documents carrying an expiry date are tracked to it, with renewal flagged ahead of time rather than discovered when the document is needed.
- **Who Pays, Recorded at Entry :** Each document fee is marked as paid by client or paid by company at the point it is logged, which settles the question while the answer is still known.
- **Company-Paid Fees Reach The Invoice:** Charges the company funded feed into the invoice builder automatically and appear as line items, so out-of-pocket spend on the client's behalf is billed rather than absorbed.

I Key Feature Modules

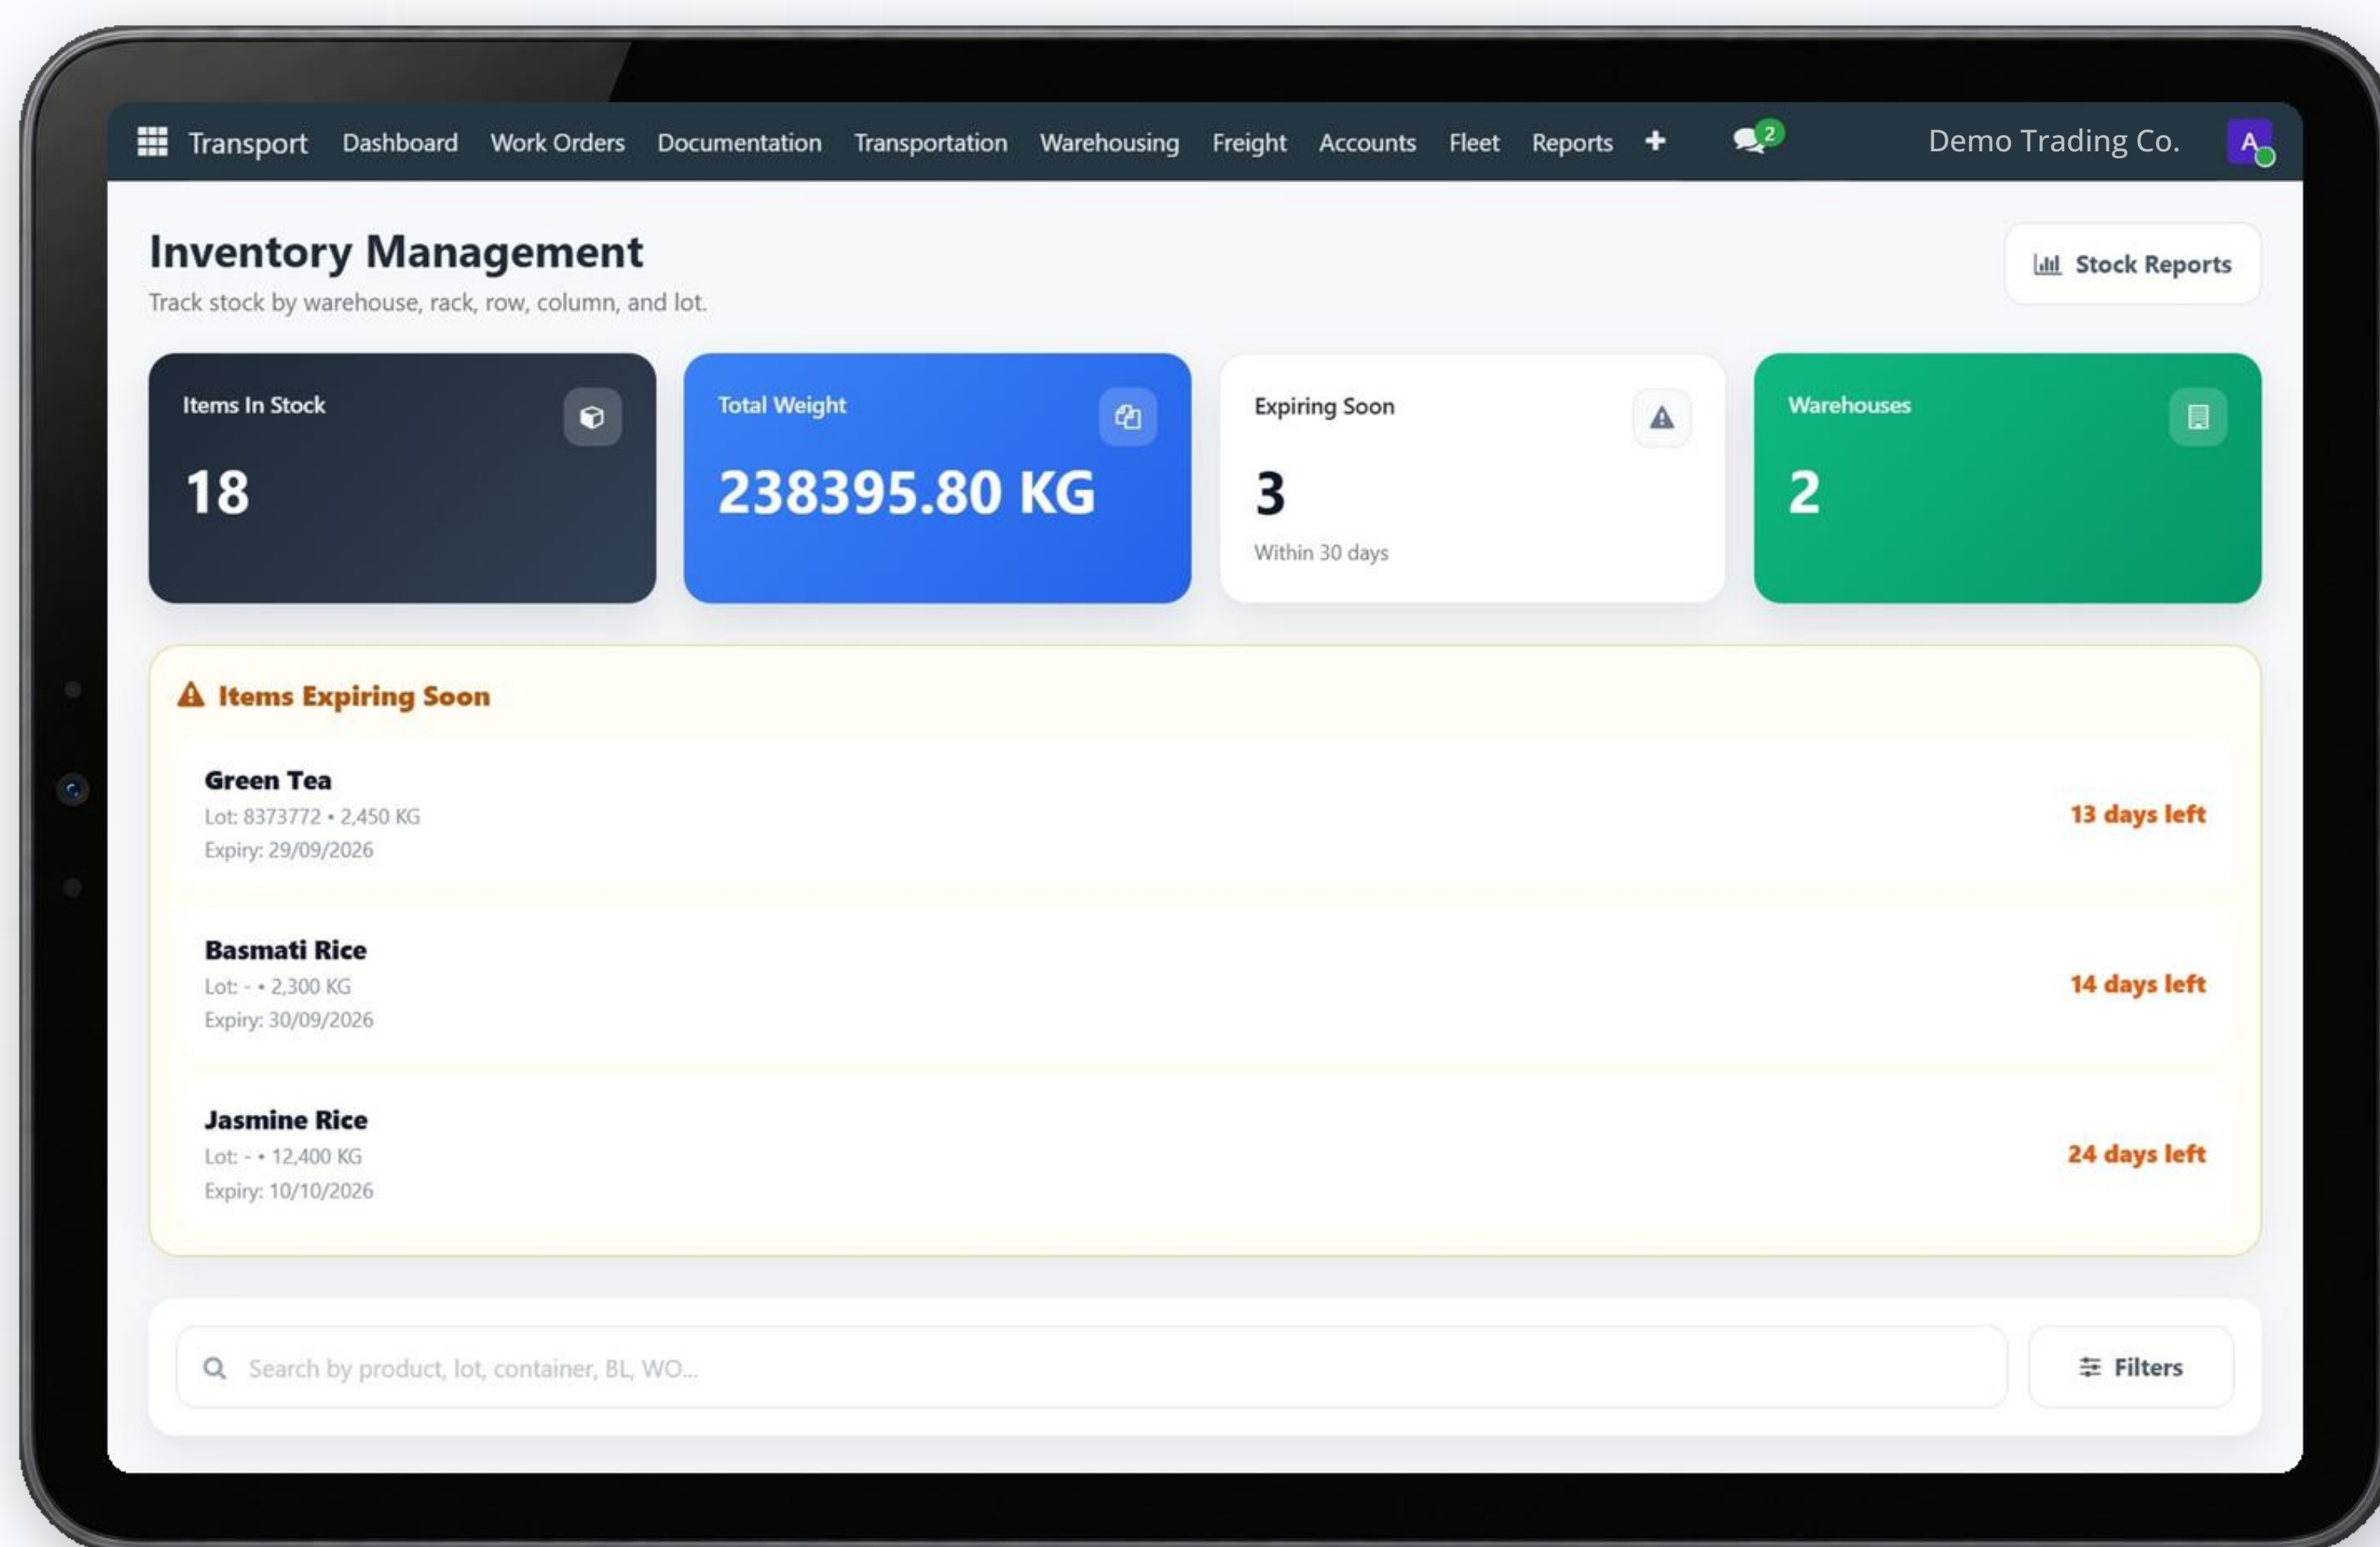

Transportation & Proof of Delivery : Trips assigned from the desk, evidence returned from the road.

- **Dispatch to Driver or Sub-Contractor :** Trips are assigned to internal drivers or sub-contractors with pickup, port clearance and delivery milestones set out on the job.
- **Proof Captured in the Field :** Weight slips, container seal numbers and loading and unloading photos are submitted by the driver from the vehicle and sync to the office in real time.
- **Trip Times on Record :** Start and end times come from the driver's own toggles, giving the desk an accurate picture of how long a trip actually took.
- **Expenses & Incidents as They Occur :** Additional trip costs and incident reports for delay, damage or roadside trouble are raised from the field, so the office learns about a problem while it is still happening.

I Key Feature Modules

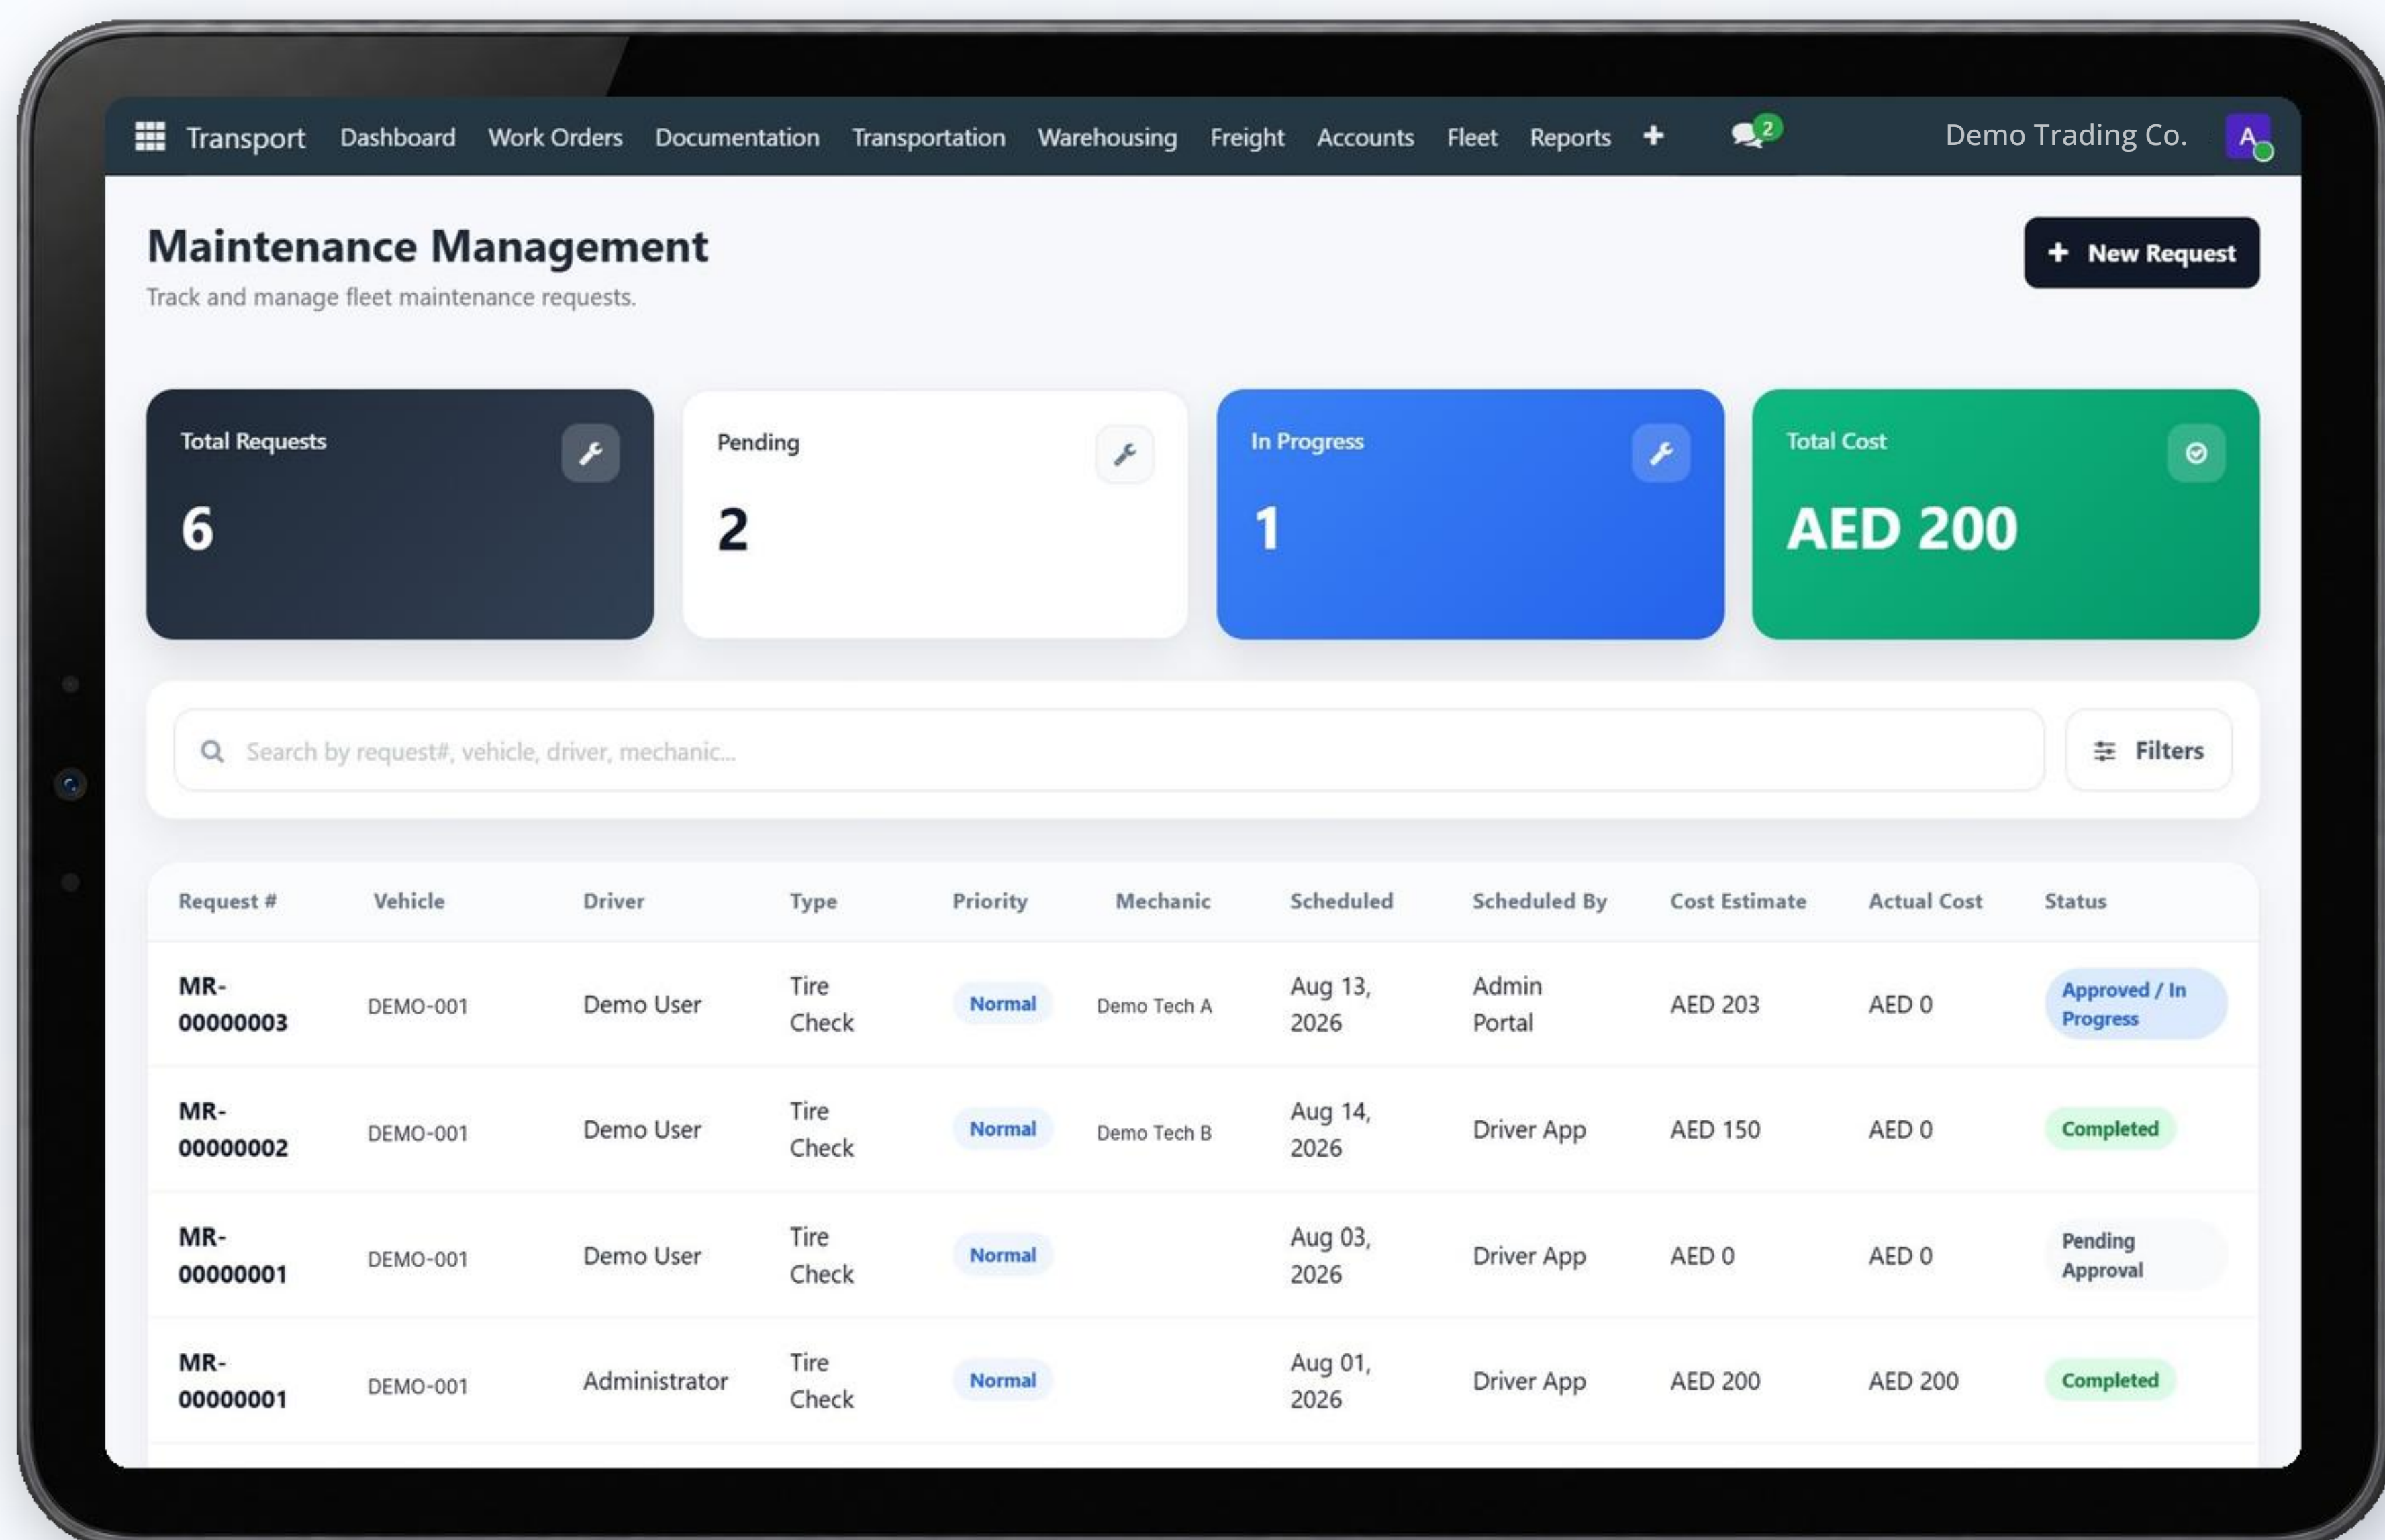

Warehousing & Inventory : Floor processing that updates the stock ledger as the cargo moves, not at the end of the week.

- **Processing on Arrival & Dispatch :** Product descriptions, bin and rack locations, agreed storage rental rates and extra service charges are logged as cargo lands or leaves.
- **GRN & GDN Generated Automatically :** Completing the operation form issues the Goods Received Note on imports or the Goods Delivery Note on exports, and inventory balances update at the same moment.
- **Packs & CBM Together :** The ledger holds physical pack balances and volumetric CBM utilisation side by side across multiple facilities, which matters when space is billed by volume and cargo is counted by pack.
- **30 Day Expiry Alerts :** Product shelf life is monitored continuously and warehouse managers are alerted 30 days out, leaving time to advise the client while the stock is still sellable.
- **Traceability :** Inventory traces by customer account, container ID and freezone or duty status, so a query about one consignment does not turn into a warehouse search.

Key Feature Modules

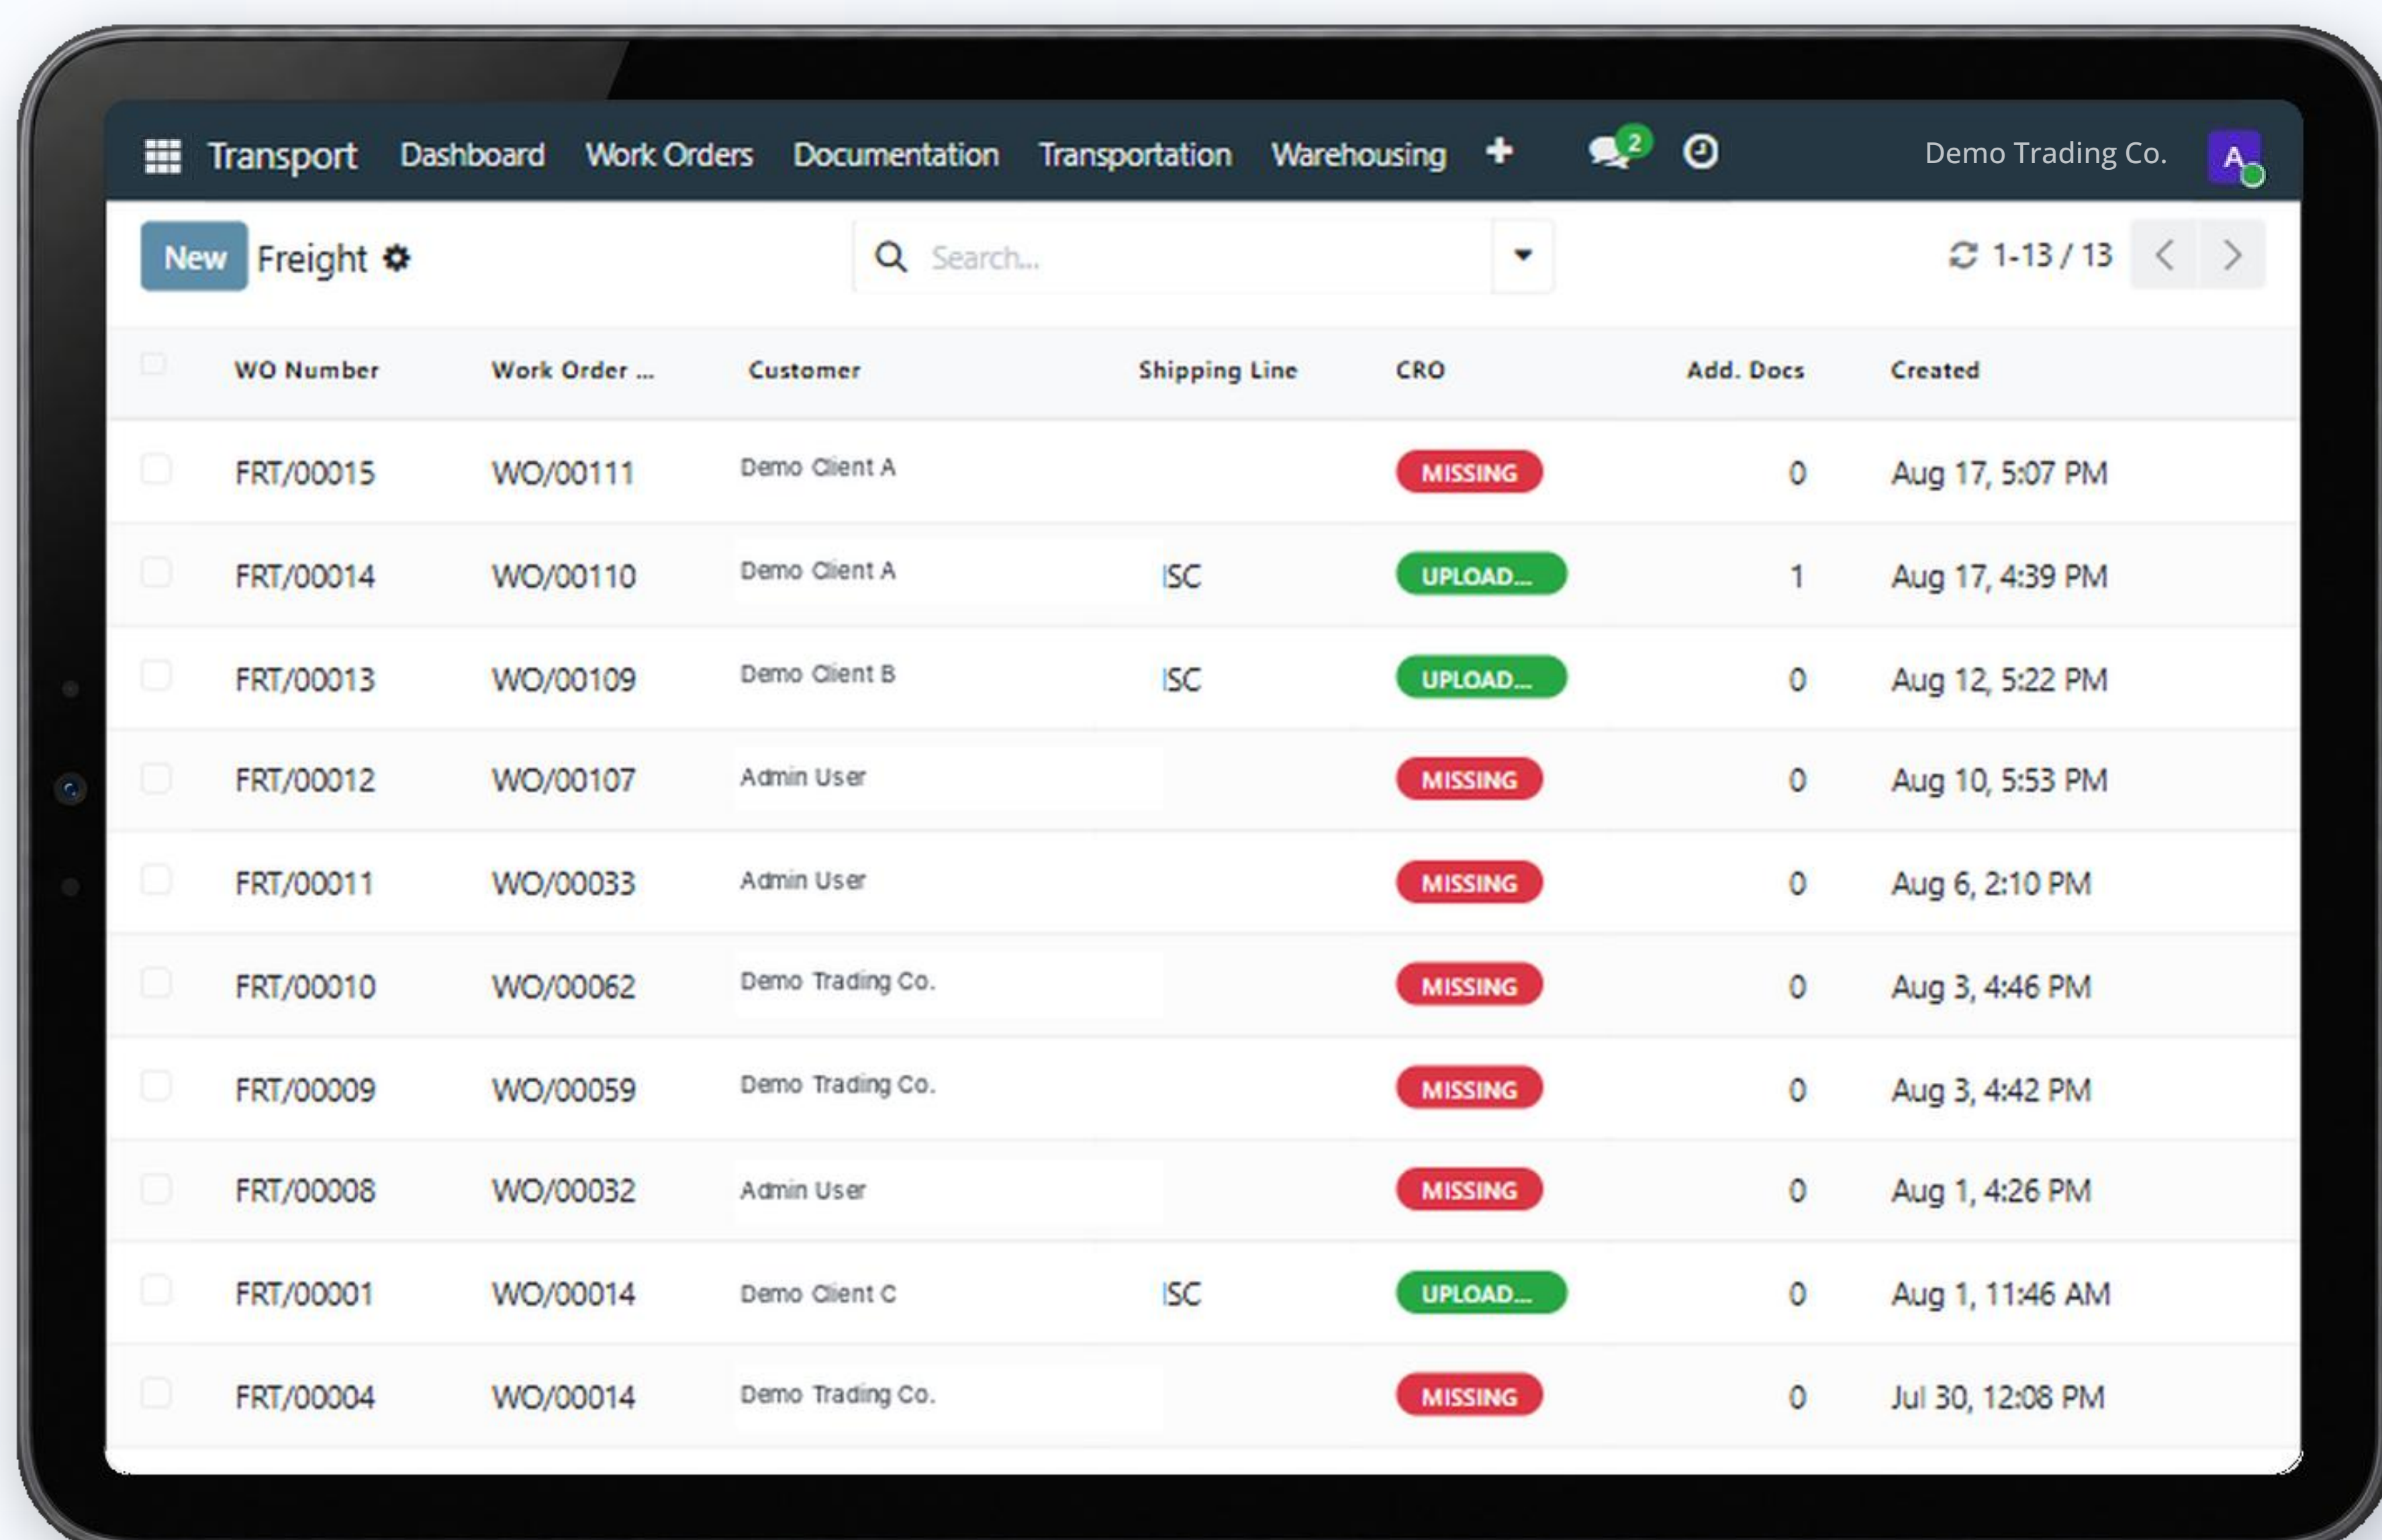

Fleet Management : Where every reefer, flatbed and container is, and what it is costing to keep on the road.

- **Status Across The Fleet :** Assets show as available, on trip or in maintenance, with mileage and trip counts attached to each one.
- **Registration & Permit Expires :** Vehicle registrations, insurance policies and transport permits carry automated warnings, which keeps a truck off the roadside for a lapsed document.
- **Maintenance Requests From Drivers :** Drivers raise vehicle issues from the app and they land in a central queue rather than a phone call that may not get passed on.
- **Repairs & Cost Overhead :** Mechanic assignment, repair status and cost are managed in the same queue, so maintenance spend accumulates against the vehicle it belongs to.

Key Feature Modules

Freight Desk : Ocean and air bookings tracked against the schedule that decides whether charges start accruing.

- **Bookings & Charges :** Carrier bookings, sell-rate freight charges and container release orders are handled on the freight desk, with Bills of Lading held against the consignment.
- **Vessel Schedules :** Transit schedules, vessel ETAs and ETDs are tracked as they update, so a shifted sailing is known at the desk rather than at the gate.
- **Port Gate Passes :** Gate passes are tracked alongside the consignment, keeping the paperwork and the cargo on the same timeline.
- **Demmorage Watched Closely :** With ETAs, release orders and gate passes visible against each consignment, free time is easier to protect and demurrage and detention easier to avoid.

Key Feature Modules

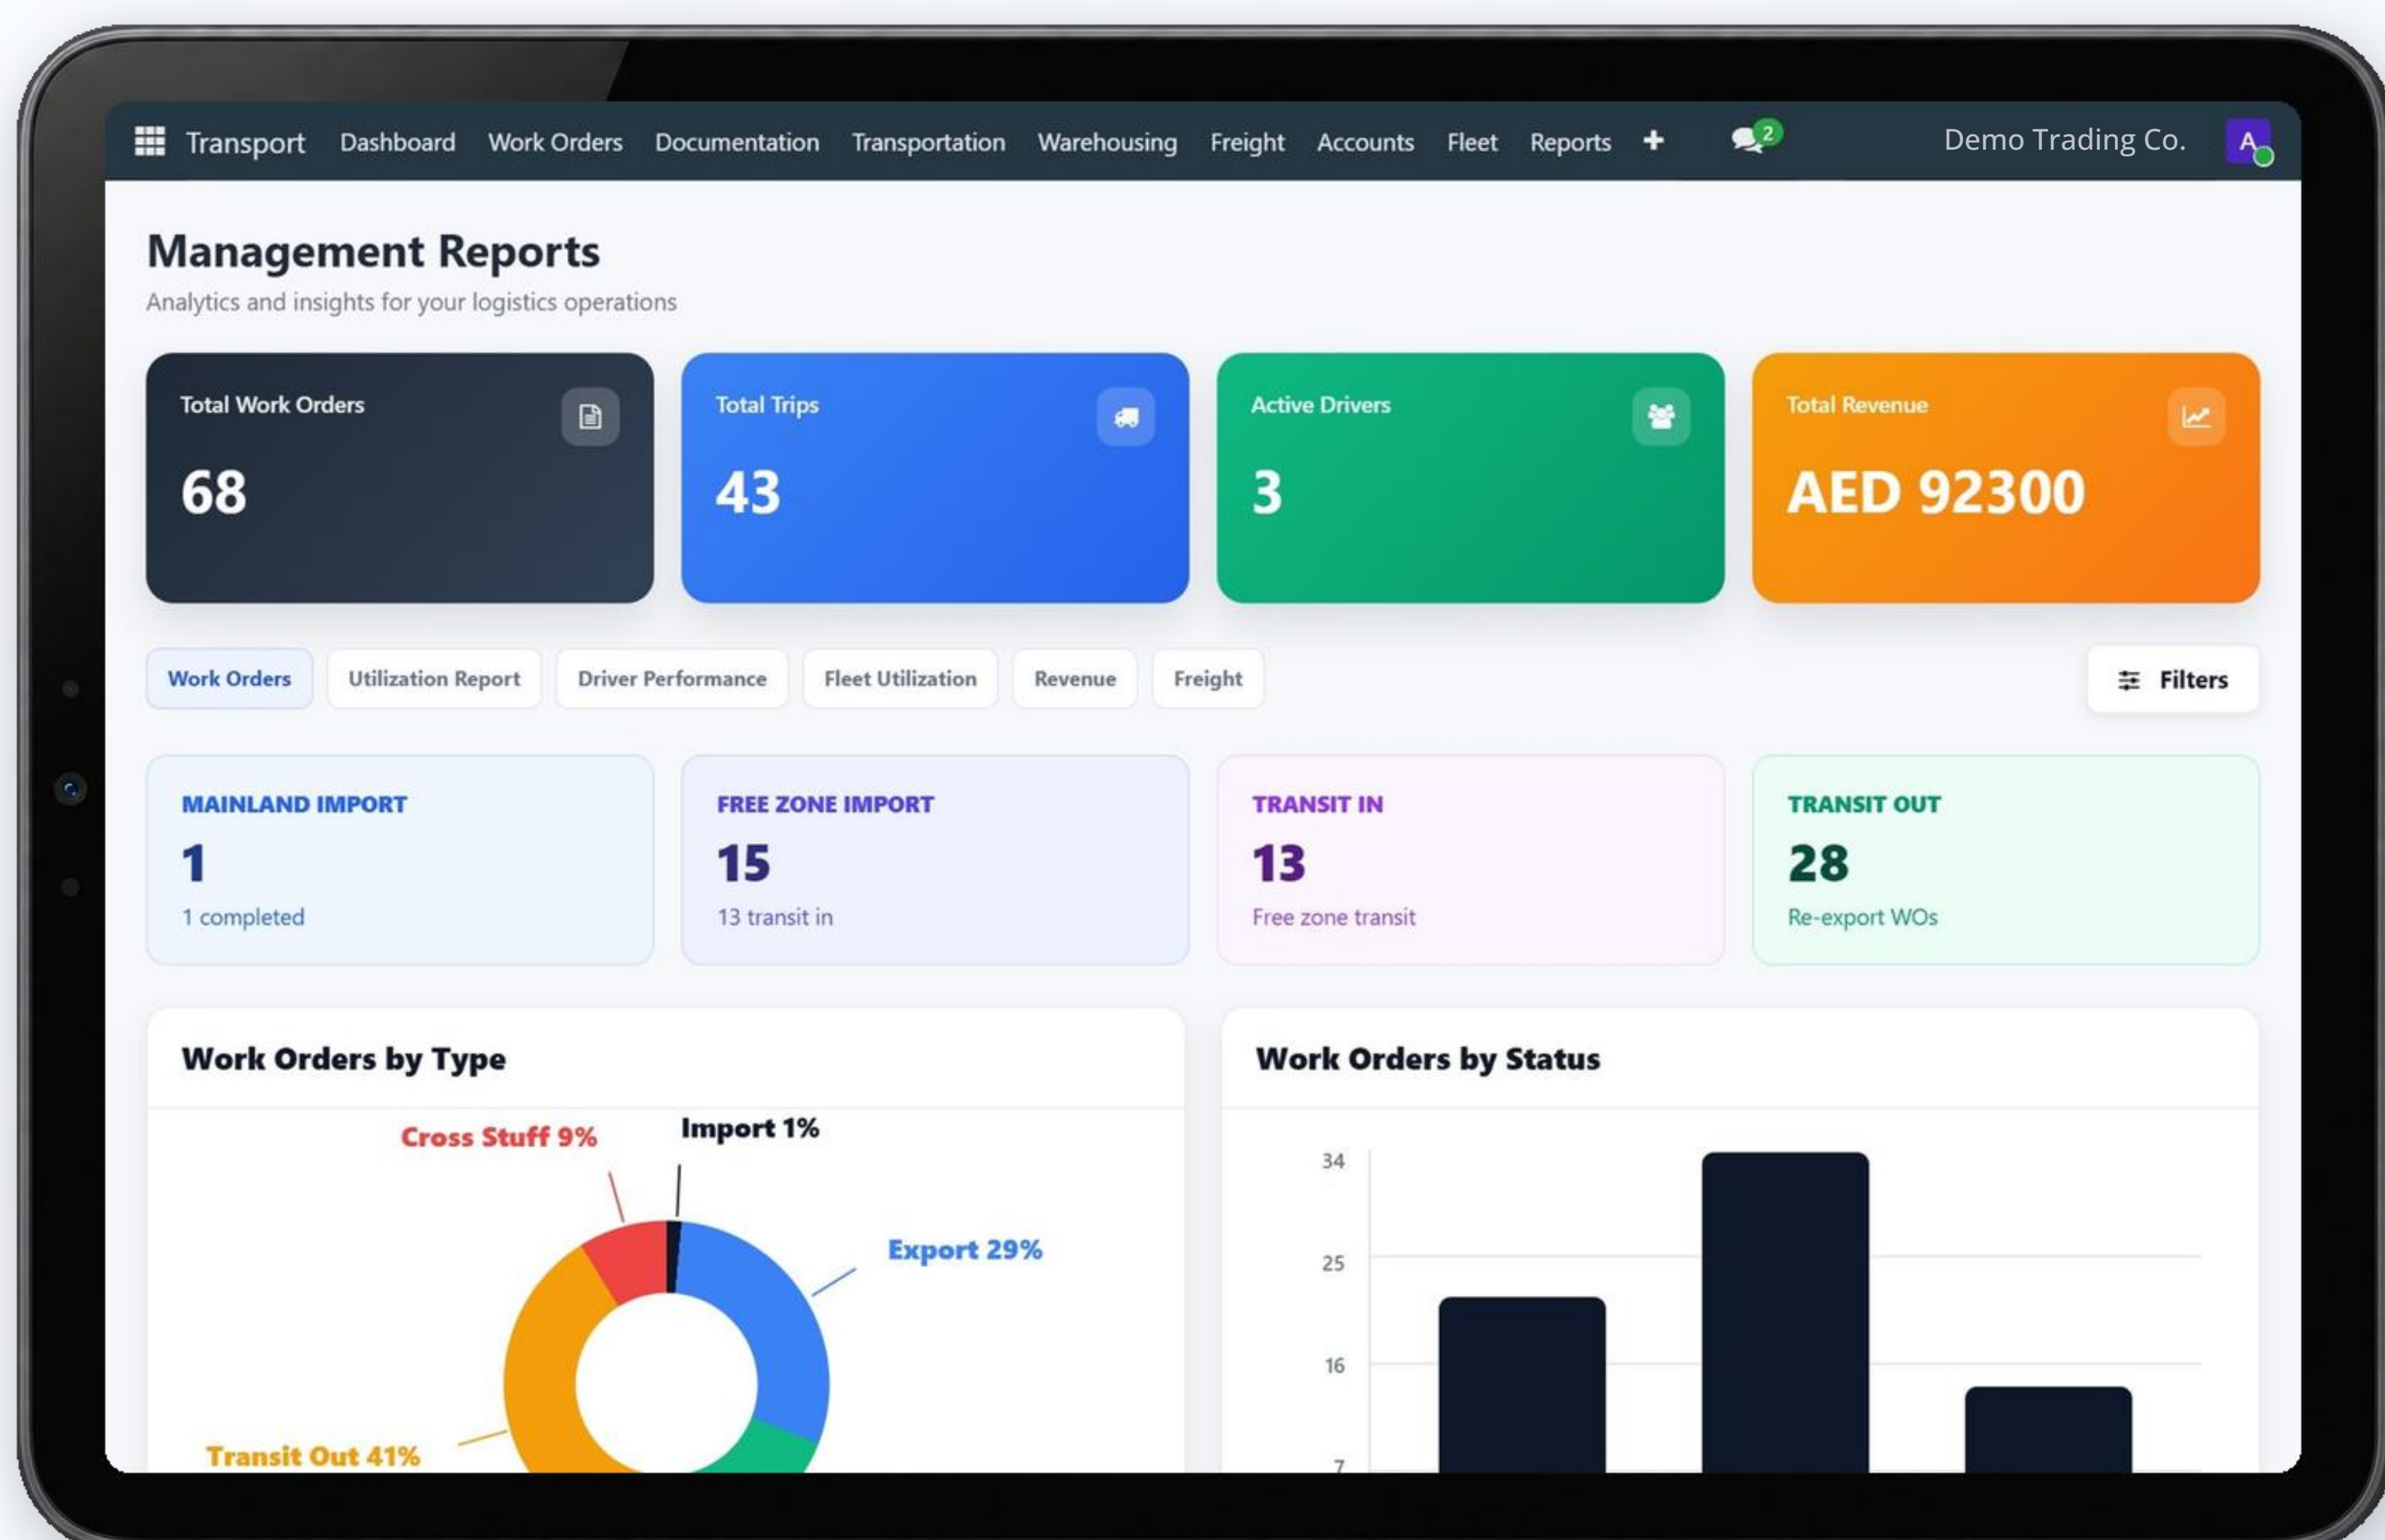

Accounts & Invoicing : The draft invoice is built from what the job actually cost, gathered as it went.

- **Charges Aggregated Automatically :** NOC charges, transportation trips, custom fees, parking allowances, additional trip expenses and company-paid documentation charges collect against the work order and arrive in the draft invoice together.
- **Line-Item Control :** Checkbox controls let finance filter charges against custom declarations and BL references before the PDF is exported, so what goes to the client is deliberate.
- **Less Left Behind :** Because costs are captured at the point they occur rather than reconstructed later, far less spend goes unbilled.
- **Petty Cash Desk :** Driver fuel reimbursements, out-of-pocket trip expenses and cash refill requests come in from the app into one review queue for approval.

I Key Feature Modules

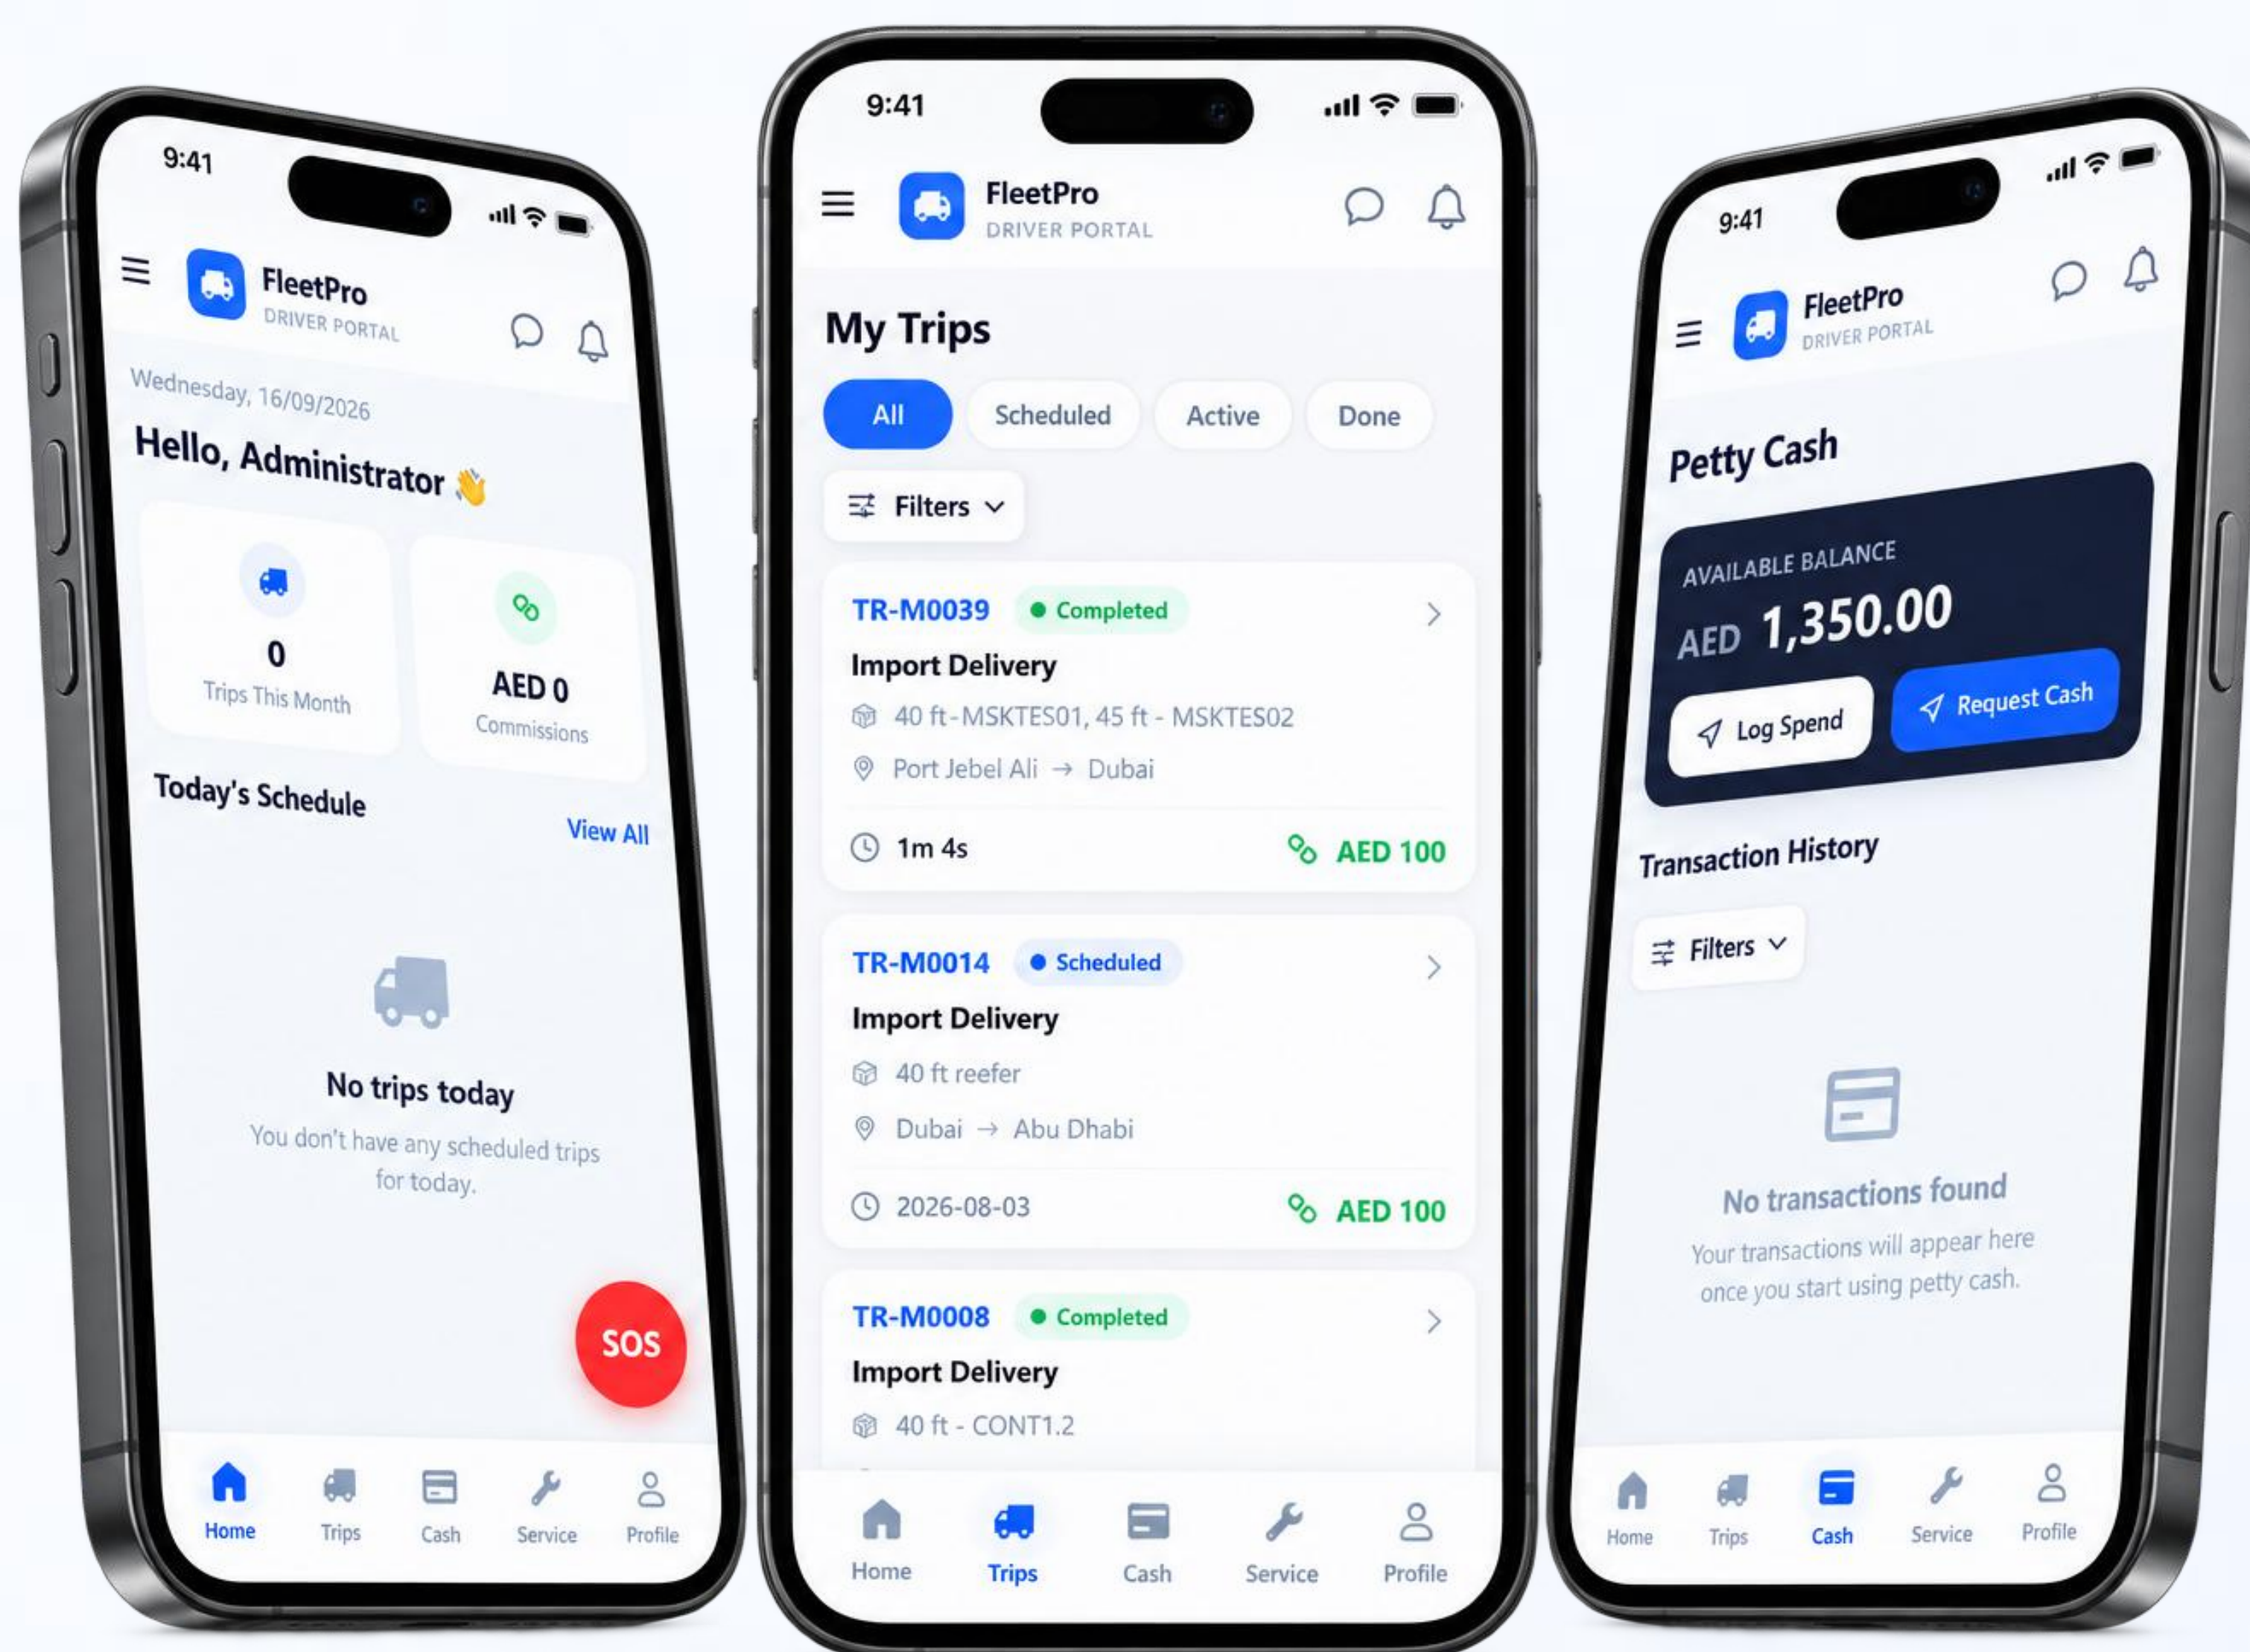

Management Reports : The numbers that show whether the operation is running profitably or just busily.

- **Work Order Analytics :** Job volumes, pipeline bottlenecks, trade type breakdown and completion turnaround times show where jobs are stalling.
- **Fleet Utilisation :** Vehicle uptime, active against idle ratios, mileage and maintenance cost overheads put a figure on what the fleet is earning and what it is absorbing.
- **Driver Scorecards :** Ratings, completed trip counts, safety adherence, incident history and earned commission are tracked per driver.
- **Revenue & Freight Margins :** Overall logistics revenue, freight profit margins, billable service yields and client billing history show which accounts and which services are carrying the business.

Driver Companion App

Built for the Cab, Synced With The Office : Drivers run their day from five screens, and what they enter reaches the admin team as they enter it.

- **Home :** Today's scheduled trips, active tasks and alerts on opening the app.
- **Trips :** Scheduled, current and previous trips in separate views, with start and end toggles, weight slips, seal numbers and loading photos captured against the trip. Bills of Lading, work orders and gate passes shared by the office are available on the same screen.
- **Cash :** Tolls, fuel and parking logged as they are spent, with refill requests sent to accounts from the road.
- **Maintenance :** Mechanical issues reported straight to the fleet manager, without waiting for the vehicle to come back to the yard.
- **Profile :** Licence, visa, passport and Emirates ID stored in a personal document vault with early renewal alerts, alongside an earnings breakdown for today, this week, this month and all time with trip-wise commission history.
